

ABSTRACT OF THE DISCLOSURE

The present new and improved invention designed to open Champagne and Sparkling Beverage bottles sealed with modern plastic stoppers is a one piece bottle opener with no movable parts. This invention is designed to fit comfortably in the palm of the hand. By securing the ring on the opener over the stopper top and the lower jaw of the opener under the bottom edge of the stopper, a consumer can easily and safely lift the stopper out of the bottle. The gas in these beverages can be released slowly and safely with this opener. By lifting up on the handle, the stopper is gently pulled up and out of the bottle without the usual past sudden explosion of gas and beverage spillage. Safety and ease in opening these bottles sealed with plastic stoppers is the purpose of this new and improved bottle opener.
